⚠ WARNING:
CHOKING HAZARD - Small parts.
Not for children under 3 years.

TO PARENTS: PLEASE READ THROUGH THESE INSTRUCTIONS BEFORE GIVING GUIDANCE TO YOUR CHILDREN.

A. SAFETY MESSAGES

1. Please read through these instructions before you start.
2. Adult assistance and supervision are required.
3. Excess plaster dust may irritate the eyes, nose and throat. Handle with care. Adult supervision is required. Do not place the material in the mouth or apply it to the body. Avoid contact with the eyes and inhalation of dust. In case of eyes contact, flush with water and consult your physician if discomfort persists. During the digging process, periodically remove the dust with the brush. Do not attempt to blow the dust off. Use a water spray bottle to dampen the dust to make removing the plaster off of the work surface easier. [Attention: Wet plaster may stain. Wear an apron or old clothes.] Protective goggles or a face mask is recommended for further protection while digging.
4. This kit is intended for children aged over 8.
5. This kit and its finished product contain small parts which may cause choking if misused. Keep away from children under 3 years old.
6. Wash your hands after all the bones have been found and the excess material has been disposed of.
7. Be careful not to harm your hands when hammering down on the chisel. Excess force is not needed to unearth the dinosaur bones.

B. REMARKS

1. Always work on a solid, level surface. Cover the work surface with newspaper to protect the working surface and make the clean-up process easier.
2. Wear a apron or old clothes as plaster can stain clothing. Use laundry detergent on stained clothing and wash separately.
3. Dispose of the excess plaster into the trash. Do not put the plaster powder down a sink or bathtub drain as this may clog the pipe.

Note: The kit is intended for kids to imitate a paleontologist digging for fossils. The digging process has to be done with patience like real paleontologist. The whole process may take a few hours or days to complete. However, if you would like to quicken the digging process, spray water onto the plaster or submerge the whole block into a sink of water for a minute before digging. This will soften the plaster. Be aware that wet plaster may stain.

C. CONTENTS

1 Plaster block with Mosasaurus skeleton embedded, 1 digging tray, adhesive tab for attaching Mosasaurus bones together, 1 hammer, 1 chisel, 1 brush, and detailed instructions.

D. ASSEMBLING THE DIGGING TRAY

Assemble the paper digging tray before starting the digging process. Once complete, place the plaster block in the middle of the tray. This will keep any area nice and clean while you unearth the amazing Mosasaurus bones. Fold and unfold along each crease line. Fold the four side flaps upward along the square crease in the middle. Fold the flaps together at each corner by pushing the extra material away from the center of the container. Fold the excess material over the container's long side flap to secure the structure as shown. You may add an adhesive tape from home to secure in place if needed.

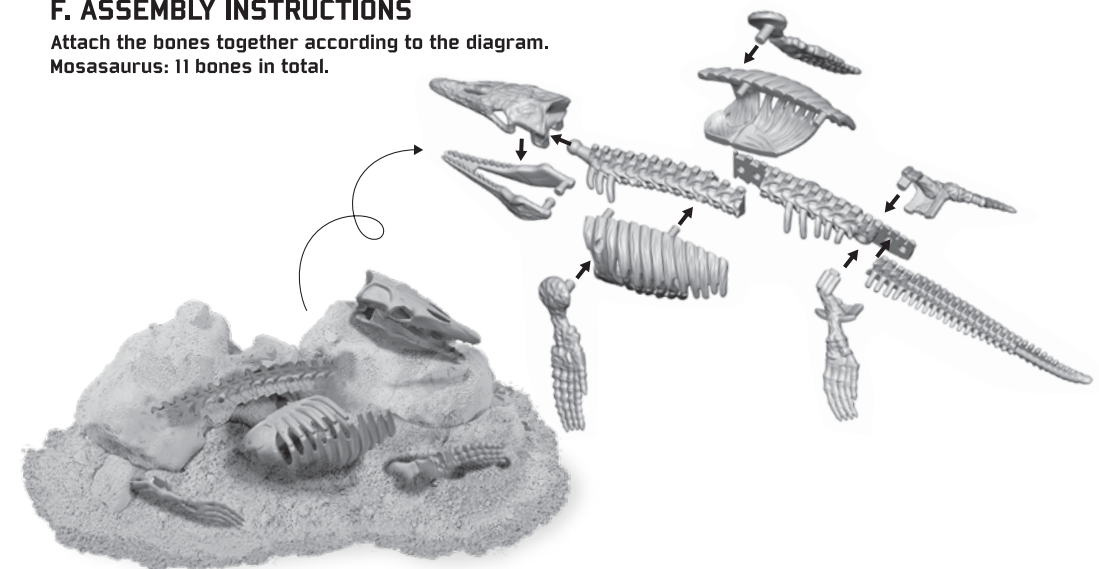

E. DIGGING INSTRUCTIONS

1. Use the hammer to gently hit the round chisel cover to chip off plaster with the chisel. When Mosasaurus skeleton bones begin to emerge, dig with care! Gently scrape and cut off the plaster surrounding the bones with the rough blade at the end of the hammer's handle.
2. Use the brush to dust off the remaining plaster from the Mosasaurus skeleton.
3. Any remaining dust can be wiped off with a damp cloth. Use the tip of the hammer handle to remove the remaining plaster from the small slots on the Mosasaurus bones for easy assembly.
4. Once all the Mosasaurus bones have been found, follow the assembly instructions to put the bones together.
5. Use the adhesive tab included to attach the Mosasaurus bones together. The adhesive tab can also be used for repositioning the bones.

F. ASSEMBLY INSTRUCTIONS

Attach the bones together according to the diagram.
Mosasaurus: 11 bones in total.

G. FUN FACTS

Did you know?

- Mosasaurus were aquatic reptiles that were like giant lizards that lived in the sea. They were not really dinosaurs.
- They lived between about 82 and 66 million years ago, during a geological period called the Late Cretaceous. They hunted all over the world's oceans.
- Mosasaurus were giant creatures. They grew to anywhere between 15 to 18 metres long.
- Mosasaurus were ferocious predators. They were the apex predators, at the top of the food chain in ancient oceans. They weren't hunted by other animals.
- Mosasaurus ate almost anything they found in the ocean - fish, sea birds, sharks and even other mosasaurus.
- The mosasaurus is named after the Meuse River in Europe, where one of the earliest fossils was dug up.

QUESTIONS & COMMENTS

We treasure you as a customer and your satisfaction with this product is important to us. In case you have any comments or questions, or you find any parts of this kit missing or defective, please do not hesitate to contact our distributor in your country, whose address is printed on the package.
